SUMMARY

Software Engineer with hands-on experience delivering full-stack web applications using **React, TypeScript, Laravel, Livewire, REST APIs, PostgreSQL, Firebase, and Java-based MVC systems**. Built product and admin workflows spanning user management, validation, role-based access, API integration, database-backed modules, and responsive interfaces. Open to software engineering roles across the stack.

EDUCATION

Universiti Teknologi Malaysia (UTM), Johor Bahru, Malaysia

Bachelor of Computer Science (Software Engineering) | Oct 2020 - Jul 2025 | CGPA: 3.59/4.00

WORK EXPERIENCE

Gates Technology Sdn. Bhd. / MyPATIL, Malaysia (Remote Contract)

Full-Stack Developer | Sep 2025 - Apr 2026

- Built and maintained 8+ Laravel and Livewire modules for user management, menu configuration, knowledge base content, ticketing, enumerations, and internal operational workflows.
- Implemented role-aware CRUD interfaces with searchable data tables, dependent fields, validation rules, soft deletes, and PostgreSQL-backed data handling.
- Developed backend-supported features using Laravel, Blade, Livewire, Eloquent, PostgreSQL, Redis, and REST-style API integration; resolved UI, data, and deployment issues.
- Collaborated with product, DevOps, and development teammates through Git-based workflows, code reviews, issue tracking, and iterative delivery.

WeCodeForYou.io, Cairo, Egypt (Hybrid)

Frontend Developer Intern | Aug 2024 - Feb 2025

- Contributed React and TypeScript features to a social and e-commerce platform within a 30-person engineering team serving thousands of active users.
- Built product pages, cart and checkout flows, wishlists, orders, storefronts, settings, and reporting screens; integrated frontend components with backend APIs.
- Handled forms, validation, client-side state, loading and error states, and responsive UI; helped reduce page load times by about 30% across major browsers.
- Resolved hydration mismatches, product-edit blocking, long-caption overflow, input validation, and support-message issues using React, TypeScript, Vite, React Hook Form, Zod, Zustand, React Query, Postman, Jira, and Git.

RELEVANT PROJECTS

EduComm - Academic Communication Platform

- Designed and delivered a full-stack academic communication platform for students and lecturers, including role-based registration, protected routes, profile management, real-time messaging, and multilingual chat translation.
- Built with React, TypeScript, Firebase Authentication, Firestore, and a Next.js API layer; implemented validation, username checks, JWT-protected requests, role-based permissions, and UAT with zero critical release defects.

IPRK Carbon Monitoring System

- Built a Java Servlet/JSP MVC web application for the Iskandar Puteri City Council, with role-based access for residents, council staff, and developers.
- Developed carbon-emission submission and management workflows, relational data models, OTP verification, Google OAuth sign-in, and GIS/Map API integration.

CERTIFICATIONS

AWS Academy Cloud Foundations | Elements of AI for Business | IELTS Overall Band 7.5

SKILLS

- Languages:** JavaScript, TypeScript, PHP, Java, SQL, Python, HTML/CSS, C++.
- Frameworks and platforms:** Laravel, Livewire, React, Next.js, Vite, Tailwind CSS, Spring Boot, Firebase.
- Databases and tools:** PostgreSQL, MySQL, Firestore, Redis, Git, GitHub, Docker, Postman, Jira, CI/CD.
- Engineering practices:** REST API design, MVC, authentication, RBAC, validation, database modeling, responsive UI, debugging, Agile/Scrum, testing, documentation.
